## **DETAILED ACTION**

### ***Election/Restrictions***

**1. This application contains claims directed to the following patentably distinct species:**

- Species I: Figures 1-2 and 5, disclose a method of heating a battery in which all of the events that require action to be taken end with the polarity being reversed
- Species II: Figure 3, discloses a method of heating a battery in which depending on the event, the speed of the polarity reversal varies
- Species III: Figure 4, discloses a method of heating a battery in which whether the battery is already being charged or not is taken into account by the system

The species are independent or distinct because the methods are different in their approach of heating a battery such that the methods provide a patentably distinct way of heating the battery.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

Art Unit: 3618

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
